

SANCTUARY TDN[®]

12-0-12 GREENS GRADE

SANCTUARY TDN[®] 12-0-12 is a premium quality turf product for golf course and sports turf management. This product combines traditional and organic ingredients to address the wear and stress problems of high quality turf. This product delivers excellent residual color, turf density, rooting and hot weather recovery. The granulation is sand-like in size which eliminates the roll-up issues of organic fertilizer products. This is available in a 40 SGN and 100 SGN product ideal for short cut greens.

SANCTUARY BENEFITS

- 1 Designed for Short Cut Greens, in Any Weather Condition**
- 2 Provides a Balance Ratio of Nitrogen and Potassium for Stress Tolerance**
- 3 Builds and Stimulates the Natural Soil Microbial Populations**
- 4 Provides Outstanding Residual Color, Density and Rooting**
- 5 All Purpose Cool and Warm Season Turf Product**

Derived from Hydrolyzed Feather Meal, Ammonium Sulfate, Methylene Urea, Urea, Potassium Sulfate, Iron Sulfate, and Magnesium Sulfate.

*6.0% Slowly available Nitrogen derived from Feather meal, and Methylene Urea.

**3.0% Stabilized Urea derived from Dicyandiamide and N-(n-butyl) Thiophosphoric Triamide

DIRECTIONS FOR USE ON GREENS

SUMMER NUTRITION:

Apply monthly at a rate of 3.5 lbs/M during the golf season to promote soil health benefits that enhance overall turf quality during all type of weather conditions. This program provides a base feed for microbial stimulation, that can be complemented with the use of liquid products.

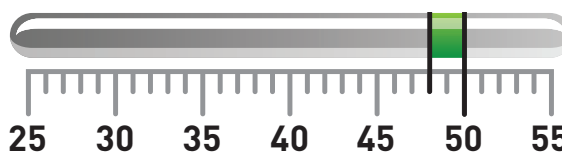

TURF RECOVERY:

Sanctuary can be applied any time when the turf is under stress. The applied range of rate is based on the severity of the problem. For disease, wear and stress issues, the rate is 4 lbs/M. For extreme turf issues, the rate can be safely increased to 6 lbs/M. This higher rate is recommended after Aeration to promote healing and turf recovery.

DORMANT FEED:

In the late fall, Sanctuary can be applied at a rate of 6 lbs/M for rooting, recovery, winter stress tolerance and spring green up.

TDN VALUE (TOTAL DIGESTIBLE NUTRIENT VALUE)

Natural fertilizers stimulate the soil microbes due to their nutritional value or TDN Value. The higher the TDN value - the greater the impact on agronomic results.
