

GRANULAR + SOIL MD

NEW LAWN RESCUE

QUALITY SERVICES IN NORTH RIDGEVILLE, OHIO

In the Fall of 2016, this lawn was planted using traditional chemical fertilizer products. This was followed up with several more applications during the 2017 growing season. Simply, the lawn was unresponsive and the turf color was yellow to lime green. These applications left the lawn weak, thin and generally in an overall poor quality turf.

BEFORE

On August 2, 2017, Sanctuary Hybrid Granular Product plus Soil MD was applied to help this lawn. By September 1, 2017, the turf density increased and the color was a nice dark green. This Sanctuary program addressed the damaged soil health of tired urban soils.

AFTER

SUMMARY

In only 30 days, the Sanctuary program offers the nutrients and the nutritional benefits to build life and energy back into tired urban soils. Sanctuary promotes soil health and turf quality that translates into outstanding residual color, turf density and rooting.

We work with Nature.
