

SHOOT

Powered by The Sanctuary

STEP 3: PLANT GROWTH & MAINTENANCE

SANCTUARY SHOOT is a bio liquid product that contains kelp and yucca plus other food ingredients for microbial stimulation. This product promotes turf recovery, rooting, disease management and wear tolerance. This product is ideal for summer stress recovery in the heat. This product can be used in conjunction with other nutrient products. This product can be applied anytime to actively growing turf.

BENEFITS

- PROMOTES GROWTH THROUGHOUT THE GROWING SEASON
- STIMULATES MICROBES THAT RELEASE SOIL NUTRIENTS
- DELIVERS OUTSTANDING HOT WEATHER STRESS TOLERANCE

DIRECTION FOR USE:

Apply Shoot as a soil drench with a watering can or added into an injection drip irrigation system.

Installation - Add 6 oz. of Shoot to 1 gallon of water. Drench plants 30 days after installation of flowers, vegetable plants, hanging flower baskets or ornamental plants.

Maintenance - Add 3 oz. of Shoot to 1 gallon of water. Apply this product as a soil drench or through the injection drip system monthly throughout the growing season.

First Aide - Add 6 oz. of Shoot to 1 gallon of water. Drench plants that are showing signs of weather stress weekly until the problem is corrected.
