
Case History: Detonation (RGA) Improves Growth of Anthurium in Mt. Dora, Florida

RGA treated Anthurium. Top view on the left and side view with roots visible on the right.

Anthurium were treated in Mt. Dora, Florida, and were evaluated for response to **RGA**. Those Anthurium treated with **RGA** were rated higher than grower standard in blind evaluations and in root evaluations. As shown in the above photographs, **RGA** treated Anthurium displayed early flowering, and significant root growth enhancement. **RGA** treated Anthurium were fuller with more breaks as well.

Root evaluations were conducted and the roots were graded on a one-to-three scale:

- 1. Not rooted well or media falls away from the roots.**
- 2. Rooted well but not circling the container**
- 3. Rooted well and circling the container**

RGA treated plants were rated a weighted average of 2.5 while the grower's standard rated 1.9D
