

Case History: Detonation (RGA) Enhances the Growth of Asparagus Fern in Mt. Dora, FL

RGA treated ferns are on the left and grower's standard treated ferns are on the right.

Asparagus ferns in Mt. Dora, Florida were evaluated for response to **RGA** foliar spray applications.

The ferns were treated on two separate occasions at a three week interval with microbial sprays over the top of the trays. Results:

**Ferns had
significantly
accelerated growth
Grew-in much fuller
Were much greener and had a greatly
enhanced appearance
Germinated 10 days
sooner than the ferns
treated with standard
grower methods**

CitroBio's RGA provides for enhanced root growth, a healthier, fuller plant, and allow for a reduction in traditional fertilizer inputs.
